Page 1 of 1

Following is a Word macro that converts "\$.xx" to "xx cents" as an example of what can be done to post-process Word documents.

```
Sub makecentsx()  
'  
' Courtesy of Softnet Systems, Inc.  
'  
Selection.HomeKey Unit:=wdStory          ' move to top of document  
selFlag = True  
Do While selFlag  
    Selection.Find.ClearFormatting  
    Selection.Find.Replacement.ClearFormatting  
    With Selection.Find  
        .Text = "$.??"                    ' wildcard matching  
        .Replacement.Text = ""           ' replace is done in code  
        .Forward = True  
        .Wrap = wdFindStop  
        .Format = False  
        .MatchCase = False  
        .MatchWholeWord = False  
        .MatchAllWordForms = False  
        .MatchSoundsLike = False  
        .MatchWildcards = True          ' wildcard matching  
    End With  
  
    If Selection.Find.Execute Then        ' the pattern has been found  
        Selection.MoveLeft Unit:=wdCharacter, Count:=1  
        Selection.Delete Unit:=wdCharacter, Count:=2  
        Selection.MoveRight Unit:=wdCharacter, Count:=2  
        Selection.TypeText Text:=" cents"  
    End If  
'  
Loop                                     ' continue through document  
  
End Sub
```
